SUMMARY

Passionate about tackling challenging software development tasks and continuously learning new technologies. I am incredibly excited to start applying theoretical knowledge in practical coding environments. and develop reliable software systems, where the technical implementation can genuinely solve meaningful problems.

EXPERIENCE

❖ Software Engineer, Car-Tuner Project, Technological University of the Shannon Athlone Sep 2025 — May 2026

Athlone, Ireland

Engineered a full-stack vehicle performance tracking platform using Next.js, React, and Supabase, enabling users to manage garage builds, dyno runs, aftermarket parts, and performance goals through a centralized dashboard. Integrated external APIs and AI-powered automation, including NHTSA VIN decoding, vehicle specs, and custom part scraping tools, reducing manual data entry and enhancing accuracy of vehicle and parts information. Implemented production-grade deployment and infrastructure workflows using Railway, Docker, GitHub Actions CI/CD, Supabase Auth, and PostgreSQL RLS policies, ensuring secure authentication, scalable deployment, and reliable performance.

- Developed innovative software solutions for car-tuning applications.
- Enhanced vehicle performance through advanced algorithm implementation.
- Streamlined user interface for improved customer experience.

❖ Prompt Engineer, Millennium Machinery LTD Jan 2025 — May 2025

Athlone, Ireland

Identified customer support bottlenecks and proposed an AI-driven chatbot solution to improve response time and customer experience Designed and delivered a customer facing AI chatbot that handled 100+ customer queries in the first month, supporting live stakeholder testing and demos Structured large scale product data to improve response accuracy across 70,000+ products, enabling reliable customer interactions Incorporated user and stakeholder feedback to refine chatbot responses, product comparisons, and post-sale support scenarios Collaborated on weekly sprint planning and review sessions to align cross-functional stakeholders and ensure timely delivery of solution features.

- Boosted model accuracy by 30% through optimized prompts
- Enhanced user engagement by 25% with targeted prompts
- Utilized data analytics to refine prompt effectiveness

EDUCATION

❖ Technological University of the Shannon Athlone Sep 2021 — Jul 2026

Bsc (Hon) Cloud computing and A.I

Athlone, Ireland

Related Coursework: Software Development, Web Development, Cloud Development, Agile Methodologies, Databases, Data Structures & Algorithms, Math & Statistics, Server/Client Side Development

SKILLS

GitHub

Eclipse

RESTful APIs

Web Application Development

Ability to Learn New Technologies

Problem Solving

Docker

Microsoft Office

Responsive Web Design

database integration

Adaptability

Teamwork and Communication
